Dear Researcher:

The Collie Health Foundation is soliciting research grant proposals for research into canine health problems associated with the collie.

Of particular interest is collie breed-specific research which includes but is not limited to: Gastric Volvulus-Torsion, Autoimmune Skin Disease and Dermatomyositis, Epilepsy, Infertility, Urinary Incontinence in spayed females, and MDR1 clinical application.

We will consider quality research of any disease affecting the canine. If you have such a project for which you would like to seek funding from the Collie Health Foundation, please fill out the Letter of Intent and/or the full application form and return it to me. Our application process continues year-round.

Thank you for your attention and interest in canine and collie research. If you have additional questions, please do not hesitate to contact me.

Regards,

Nancy L. Kelso, D.V.M.

Nancy L. Kelso, D.V.M.
